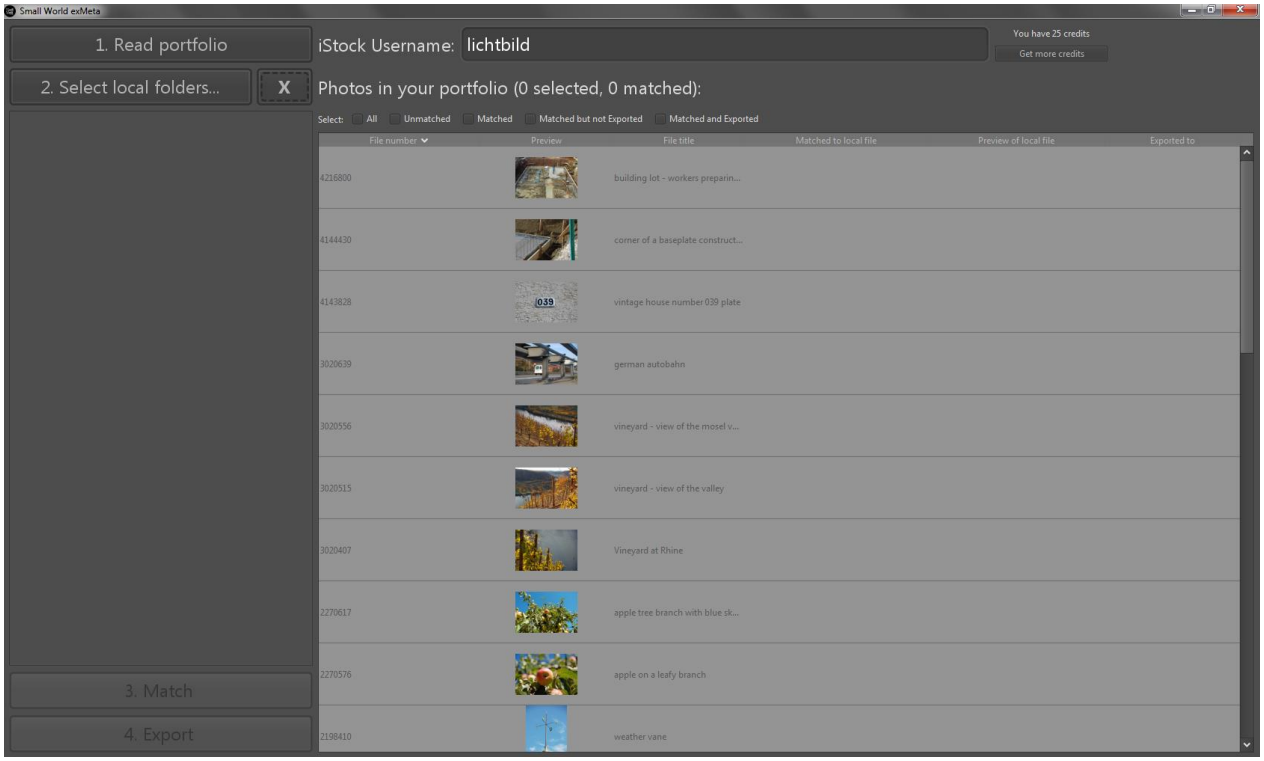
SMALL WORLD EXMETA – USER'S MANUAL

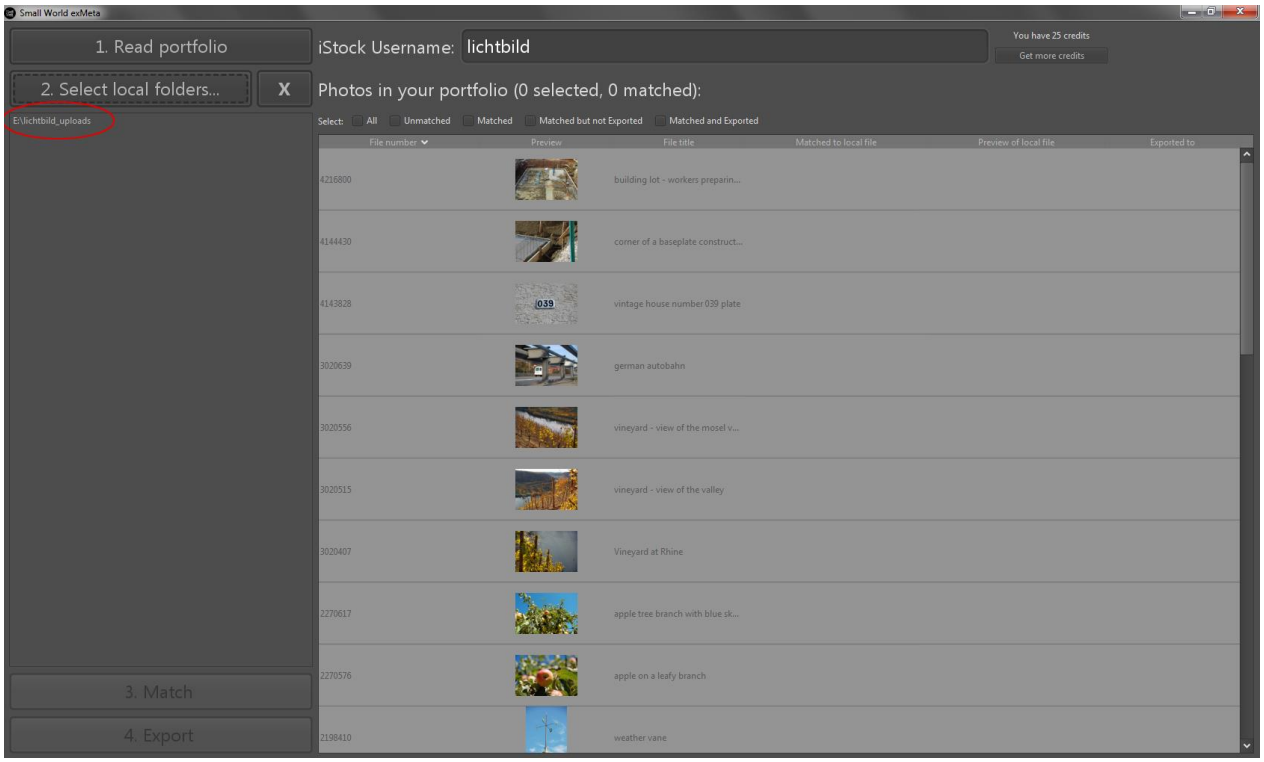
Step1:

Enter your iStock username in the text field at the top and press enter or click the button labelled „1. Read portfolio". Then wait until exMeta has read all photos in your portfolio:



Step 2:

Select the folder(s) on your local computer containing your full-res JPEGs (you can select as many folders as you like, and exMeta will automatically look at all subfolders, too)



Step 3:

Select the photos in your portfolio which should be matched against the JPEGs in the folders you chose in step 2, then click the button labelled “3. Match X files”. If you have a big portfolio and/or have selected a big number of JPEGs on your local machine, the matching process can take several hours.

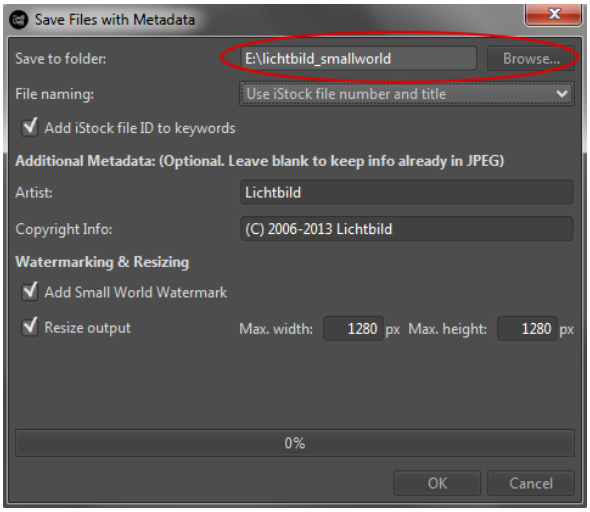
SMALL WORLD EXMETA – USER'S MANUAL

Export options:



The photos selected in step 4 will be copied to a new folder and all iStock metadata (title, keywords, description) will be added to the files' EXIF / IPTC records.

To choose an export location, use the "Browse…" button in the top right.

You can also have your exported images downsized and watermarked, using the standard Small World watermark.

Result:

Small World watermarking:

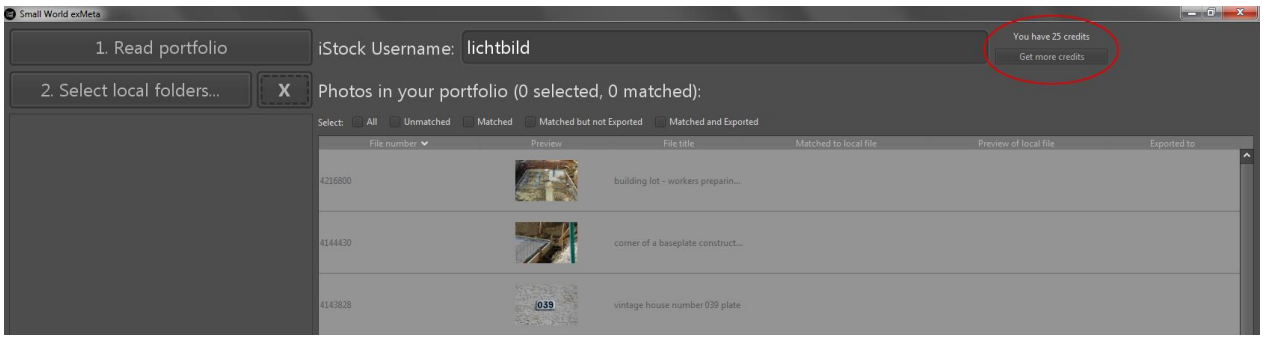
To export files, you will need credits. Your credit balance is displayed on the top right.



When matching doesn't work

In rare cases (less than 1%) exMeta can match files wrongly or not find the proper match at all, although the matching JPEG is there in one of the selected input folders. In this case, you can right-click the respective row in the table and use the popup menu to either discard the found match or manually select a matching file from your local machine.
